Low phytase production levels result in phytate in the diet the excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Upo on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updatec on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transgenic non-human animal for gastrointestinal tract specific expression of a protein, preferably phytase, comprises a nucleic acid sequence including a heterologous transgene construct encoding the

                                                                                                                                                                                                                                                                                                                                        The patent discloses recombinant bacterial phytase from Escherichia coli CC K12 appA phytase. The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease CC stability at low pH. The recombinant phytase is useful for improving the compared with wild-type phytase. It has improved protease CC nutritional value of phytate-containing foodstuffs and subsequently CC improving the growth performance of an organism that consumes it, in CC vitro purposes related to research, discovery and development. They are CC producing or manufacturing alcoholic and non-alcoholic drinks based on CC the use of moulds grains and/or plants, in biopulping and bio-bleaching where a reduction in the use of environmentally harmful chemicals that CC are traditionally used in the pulp and paper industry is desired and in CC the reduction or possible elimination of the need for mineral CC supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. CC The present sequence is B. coli appA phytase wild type protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
